

# **AB.J4U Baltic aphotic sand characterized by no macrocommunity**

## **Author**

HELCOM RED LIST Biotope Expert Team

## **Textual description**

Baltic aphotic bottoms with at least 90 % coverage of sand. Sand has less than 20 % of mud/silt/clay fraction (<63 µm), and the proportion of sand (grain size 0.063–2 mm) exceeds 70% of the combined gravel and sand fraction. Macro- epi- or infauna is not present.

## **Physical environment**

Substrate is sand. Depth below approximately 30 m. Appears in high energy exposure areas.

## **Geographic range**

Whole Baltic Sea

## **Correspondence with other classification systems**

### **HELCOM 1998:**

2.5 Sandy bottoms

2.5.1 Aphotic zone

### **EUNIS 2012:**

A5 Sublittoral sediment

A5.2 Sublittoral sand

A5.27 Deep circalittoral sand

A5.273 Baltic sandy bottoms of the aphotic zone
